

Nantes, 14th December 2018,

Dear Deputy K. Pamplin.

AIA Life Designers is a major multidisciplinary consultancy providing a full range of combined expertise and services in architecture, engineering as well as project management, urban planning and sustainable development. Its health know-how is historic in France and worldwide since it was set up in 1965.

On the 8th November 2018 we received a delegation of five people including three members of the States of Jersey. They came to visit the Private Hospital in Plerin that we designed, project managed, and built. We were also able to explain to them our vision for “tomorrows Hospital”.

Following this visit, we came to Jersey on 4th December to visit and study three alternative sites to your General Hospital in Gloucester Street. Namely, St Saviours Hospital, Warwick Farm, and Overdale Hospital.

We understand that a States debate will take place in the new year when the decision on whether to build your new Hospital on Gloucester Street will be made. If the decision is not to build on Gloucester Street, we would like to inform you that we would be willing to carry out a feasibility study on the three sites mentioned above.

To do this, we need to know and understand your medical project requirements which would include a complete list of everything that you require in your new Hospital, including the size of each area. It would then take us two months from being commissioned to carry out and deliver this study. The cost would be: For one site £24k, two sites £42k, and three sites £60k. These prices are VAT included.

We would be happy to invite your Scrutiny Panel to visit us in Plerin as the other States members have done. Alternatively, should you want us to meet you in Jersey to discuss this project in more depth, we would be happy to do this.

Yours sincerely

Marc Le Cam Architect and Export Manager

Nicolas Boucher, Senior Architect and Health Director

Cc Deputy Mary Le Hegarat and Connetable John Le Maistre
